ABSTRACT
The DEEM’23 workshop (Data Management for End-to-End Machine Learning) is held on Sunday June 18th, in conjunction with SIGMOD/PODS 2023. DEEM brings together researchers and practitioners at the intersection of applied machine learning, data management and systems research, with the goal to discuss the arising data management issues in ML application scenarios. The workshop solicits regular research papers (10 pages) describing preliminary and ongoing research results, including industrial experience reports of end-to-end ML deployments, related to DEEM topics. In addition, DEEM 2023 has a category for short papers (4 pages) as a forum for sharing interesting use cases, problems, datasets, benchmarks, visionary ideas, system designs, preliminary results, and descriptions of system components and tools related to end-to-end ML pipelines. The workshop received 13 high-quality submissions on diverse topics relevant to DEEM, of which 6 regular papers and 7 short papers.

ACM Reference Format:

1 INTRODUCTION
Applying Machine Learning (ML) in real-world scenarios is a challenging task. In recent years, the main focus of the data management community has been on creating systems and abstractions for the efficient training of ML models on large datasets. However, model training is only one of many steps in an end-to-end ML application, and a number of orthogonal data management problems arise from the large-scale use of ML.

For example, data preprocessing and feature extraction workloads may be complicated and require simultaneous execution of relational and linear algebraic operations. Next, model selection may involve searching many combinations of model architectures, features, and hyper-parameters to find the best-performing model. After model training, the resulting model may have to be deployed and integrated into business workflows and require lifecycle management using metadata and lineage. As a further complication, the resulting system may have to take into account a heterogeneous audience, ranging from domain experts without programming skills to data engineers and statisticians who develop custom algorithms.

Additionally, the importance of incorporating ethics and legal compliance into machine-assisted decision-making is being broadly recognized. Critical opportunities for improving data quality and representativeness, controlling for bias, and allowing humans to oversee and impact computational processes are missed if we do not consider the lifecycle stages upstream from model training and deployment. DEEM welcomes research on providing system-level support to data scientists who wish to develop and deploy responsible machine learning methods.

DEEM [1–6] aims to bring together researchers and practitioners at the intersection of applied machine learning, data management and systems research, with the goal to discuss the arising data management issues in ML application scenarios. The workshop solicits regular research and industry papers (10 pages plus references) describing preliminary or completed research results, as well as short papers (4 pages). With the latter paper category, the DEEM workshop aims—complementary to the recently introduced, scalable data science and engineering tracks at SIGMOD and PVLDB—to establish a broader forum for sharing interesting use cases, problems, datasets, benchmarks, visionary ideas, system designs, and descriptions of system components and tools related to end-to-end ML pipelines.

2 TOPICS OF INTEREST
Over the last years the topics of interest naturally expanded as ML pipelines become increasingly complex, and aspects of data-centric AI become increasingly important for building end-to-end ML systems in practice. The DEEM’23 call for papers outlined the following areas of particular interest for the workshop:

• Data Management in Machine Learning Applications
• Definition, Execution and Optimization of Complex Machine Learning Pipelines
• Systems for Managing the Lifecycle of Machine Learning Models
• Systems for Efficient Hyper-parameter Search and Feature Selection
• Machine Learning Services in the Cloud
3 ORGANIZATION

Since its inception in 2017, the DEEM workshop is organized by changing teams of workshop co-chairs, governed by a steering committee, and supported by expert program committees.

Workshop Chairs: The DEEM’23 workshop is jointly organized by the following workshop chairs, drawing from the experience of the previous five DEEM workshops and their chairs:
- Matthias Boehm (TU Berlin)
- Madelon Hulsebos (University of Amsterdam)
- Shreya Shankar (UC Berkeley)
- Paroma Varma (Snorkel AI)
- Patrick Damme (TU Berlin)
- Sebastian Schelter (University of Amsterdam)
- Volker Markl (TU Berlin)
- H.V. Jagadish (University of Michigan)
- Markus Weimer (Microsoft AI)
- Nezihe Merve Gürel (ETH Zürich)
- Zoi Kaoudi (TU Berlin)
- Bojan Karlaš (Harvard)
- Asterios Katsifodimos (TU Delft)
- Arun Kumar (University of California San Diego)
- Nantia Makrynioti (RelationalAI)
- Laurel Orr (Stanford University)
- Tilmann Rabi (HPI and University of Potsdam)
- Berthold Reinwald (IBM)
- Sebastian Schelter (University of Amsterdam)
- Nesime Tatbul (Intel Labs and MIT)
- Eugene Wu (Columbia University)
- Xiaozhe Yao (ETH Zürich)
- Chi Zhang (Brandeis University)

Steering Committee: A steering committee governs the DEEM workshop and ensures its continuation with a healthy rolling handover of workshop co-chairs. This committee includes:
- Juliana Freire (New York University)
- Bill Howe (University of Washington)
- H.V. Jagadish (University of Michigan)
- Volker Markl (TU Berlin)
- Sebastian Schelter (University of Amsterdam)
- Stefan Seufert (Amazon Research)
- Markus Weimer (Microsoft AI)

Program Committee: Furthermore, we thank the DEEM’23 program committee—with diverse backgrounds and seniority levels—for reviewing the individual submissions and providing detailed and constructive feedback.
- Raul Castro Fernandez (University of Chicago)
- Patrick Damme (TU Berlin)
- Rainer Gemulla (University of Mannheim)
- Nantia Makrynioti (RelationalAI)
- Bill Howe (University of Washington)
- tofu Wang (University of California San Diego)
- Julian Mitchell (University of California, Berkeley)
- bojan Karlaš (Harvard)
- Asterios Katsifodimos (TU Delft)
- Nezihe Merve Gürel (ETH Zürich)
- Nezihe Merve Gürel (ETH Zürich)
- Zoi Kaoudi (TU Berlin)
- Bojan Karlaš (Harvard)
- Asterios Katsifodimos (TU Delft)
- Arun Kumar (University of California San Diego)
- Nantia Makrynioti (RelationalAI)
- Laurel Orr (Stanford University)
- Tilmann Rabi (HPI and University of Potsdam)
- Berthold Reinwald (IBM)
- Sebastian Schelter (University of Amsterdam)
- Nesime Tatbul (Intel Labs and MIT)
- Eugene Wu (Columbia University)
- Xiaozhe Yao (ETH Zürich)
- Chi Zhang (Brandeis University)

4 WORKSHOP FORMAT

The workshop will be held in-person with the following half- or full-day schedule:
- Opening and closing keynotes, by industrial and academic speakers of diverse backgrounds,
- 2-3 technical sessions, each featuring an invited speaker and several accepted papers, and
- Potentially, a panel on a topic relevant to DEEM and complementary to the accepted papers.

With the help of our sponsors Snorkel and Weights and Biases, we offer one travel grant and award the best paper and presentation.
